SCIENTIFIC PROFILE

My background is in aquatic ecohydrology and contaminant hydrogeology, with the aim to generate solutions to complex socio-ecological systems (SES) challenges and ensure the sustainable use of landscapes. My career integrates >15 years of transdisciplinary research dedicated to developing and applying systems thinking approaches to water resources management. My research has focused on investigating the interfaces across systems, initially physically (e.g. contaminant groundwater-surface water interactions), and recently across the environment-society interface (for sustainable water governance). Holistic, multifunctional risk management strategies, including green-blue approaches like Nature-based Solutions, have a key role to play in operationalizing sustainable development policies. Supporting the development of innovative stakeholder engagement tools and knowledge co-creation/transfer along the climate-hydrology-impact modelling chain comprises the focus of my current position at SMHI.
