

SMHI Edge™

SMHI has launched a new way of product classification during spring 2008. All products included in "Weather for Energy" will be divided into three different product segments to facilitate for our customers.

Our new product segments are SMHI Edge™ - products when time is crucial, SMHI Added™ - products that have added value with SMHI knowledge and competence and SMHI Content™ - products regarding e.g. data, GRIB files, climate parameters and historical data.

During 2008 SMHI has launched a new product, *SMHI Edge™*. This is a brand new possibility for business set-up between you as a customer and us as a delivery partner of weather data.

Energy prices are driven by the weather. The key to success when trading on the energy market is to have access to the fastest, most reliable weather data source.

SMHI Edge™ has no geographical constraints. Data can be provided for the whole globe and any regions, stations or grid points depending on your requirements.

Potential *SMHI Edge™* customers are for instance energy traders and companies working with analysis covering energy, base metals and agriculture. We also have customers in some of the world's leading advisory, risk management and investment banking services.

We call it *SMHI WeatherSync®* – our way of working.

SMHI

Examples on products included in SMHI Edge™

SMHI Edge data

Supports several standard formats to facilitate integration of weather data into your line-of business applications, with an outstanding delivery time. You will have access to the data the instant it is available.

SMHI Edge web

Data is pushed to your private Edge web-page using Ajax push technology. The data is displayed the instant it becomes available and presented as maps.
